

GUARDIAN SPECIES:

# TRICHOGRAMMA BENEFICIAL WASPS

FIELD PHOTOS:

FIELD NOTES:

▶ Very effective at destroying many types of caterpillars (which are leaf eaters in the larvae stage)

▶ Considered to be the most widely beneficial insect, due to its effectivity on a wide variety of pests.

▶ They fight by laying their eggs inside the eggs of their prey. The Trichogramma eggs hatch first, eating the prey's eggs before they hatch!

*The Tomato Hornworm which infests many gardens, is one of the wasps favorite targets!*
