

GUARDIAN SPECIES:

# GREEN LACEWINGS

FIELD PHOTOS:

FIELD NOTES:

▶ Green Lacewings are the BEST all-purpose insect for your garden.

▶ Their larvae look like little alligators that are called "Aphid Lions" because they can eat up to 1,000 aphids per day!

▶ They also devour Spider Mites, Scale, Thrips, Leafhoppers, Whitefly, Beetle Larva and more!

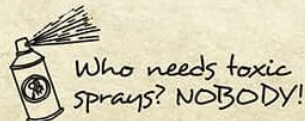

The larva have sickle-shaped jaws (mandibles) that they use to pierce prey and suck out body juices.

They lay eggs on tiny threads suspended from your plant's leaves.
